

Domotz

Network monitoring and management.

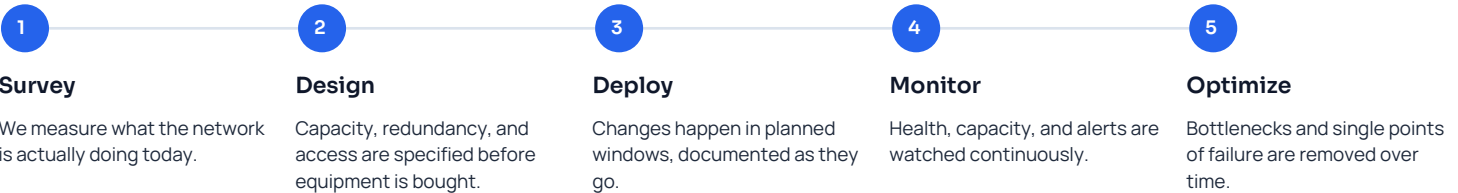

Service illustration • Networking Infrastructure

domotz

Domotz provides network monitoring, device discovery, and remote network management. Massive IT uses it to keep watch over switches, firewalls, access points, printers, and other network devices across customer sites.

A clear path to delivery

Product areas & practical applications

Product area	Practical application
Network discovery and inventory	automatic discovery of devices on every monitored network
Monitoring and alerting	uptime, performance, and SNMP monitoring with alerts
Network topology mapping	visual maps of how devices are connected
Remote network access	secure remote management of network devices

When to talk to us

- Unknown devices on the network with no inventory
- Outages discovered only when users complain
- Troubleshooting remote sites without anyone on-site

Deployment & ongoing support

Massive IT deploys Domotz collectors at customer sites, tunes alerting, and uses its inventory and topology data to troubleshoot quickly and document networks.

Scope and licensing vary by environment. Product availability and support terms are confirmed during planning.
