

Dell

Business laptops, desktops, servers, and storage.

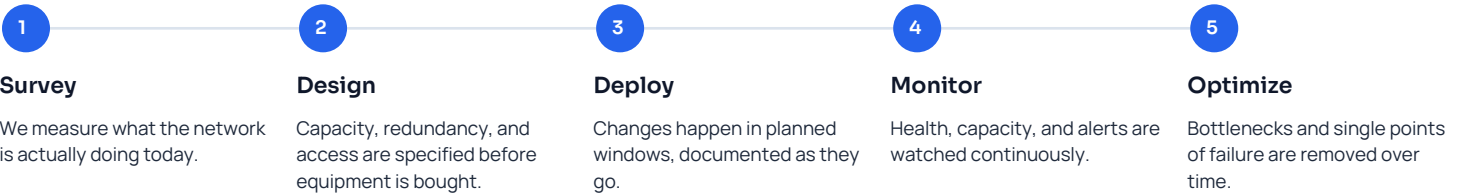

Service illustration • Networking Infrastructure

Dell builds the laptops, desktops, servers, and storage that a large share of businesses run on. Massive IT helps customers choose the right Dell hardware, procure it, image and deploy it, and support it through its full lifecycle — so equipment refreshes become planned projects instead of emergencies.

A clear path to delivery

Product areas & practical applications

Product area	Practical application
Dell Latitude and Precision	business laptops and mobile workstations built for security, manageability, and long service life
Dell OptiPlex	business desktops and all-in-ones for office and front-line work
Dell PowerEdge	rack and tower servers for on-premises and hybrid workloads
Dell PowerVault and PowerStore	storage platforms for file, block, and virtualization workloads

When to talk to us

- Aging PCs and servers that are out of warranty or no longer receive firmware and security updates
- New hires waiting on equipment that has to be ordered, imaged, and configured by hand
- Server and storage capacity that no longer keeps up with the business

Deployment & ongoing support

Massive IT handles Dell hardware selection, quoting, procurement, deployment, and warranty coordination. We standardize device models, pair new PCs with Microsoft Intune or our endpoint management tools for zero-touch setup, and plan server and storage refreshes around workload growth and support end dates.

Scope and licensing vary by environment. Product availability and support terms are confirmed during planning.
