

Enterprise networking, collaboration, and security.

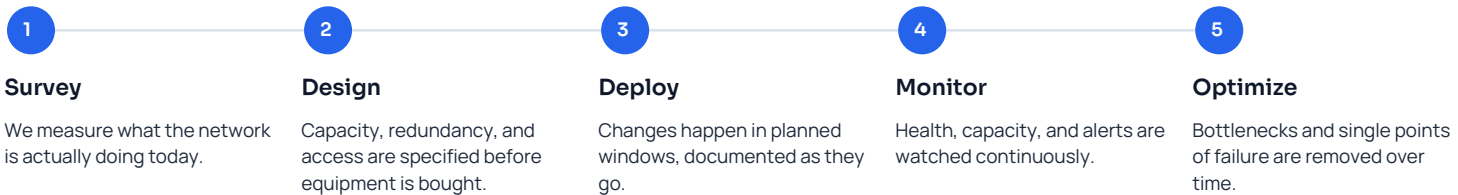

Service illustration • Networking Infrastructure

Cisco is one of the most widely deployed networking vendors in the world. Massive IT designs, deploys, and manages Cisco switching, routing, wireless, and security so customers get a network that is fast, segmented, and documented.

A clear path to delivery

Product areas & practical applications

Product area	Practical application
Cisco Catalyst switching	campus and access switching for wired networks
Cisco routing	branch and WAN routing for connecting sites and clouds
Cisco wireless	enterprise Wi-Fi access points and controllers
Cisco security	firewalls and secure access for protecting the network edge

When to talk to us

- Networks that grew piece by piece and are undocumented or unsegmented
- End-of-life switches and routers that no longer receive software updates
- Slow or unreliable connectivity between offices and to the cloud

Deployment & ongoing support

Massive IT assesses existing Cisco environments, designs upgrades and refreshes, and handles configuration, deployment, monitoring, and ongoing management. We document the network as we go so customers know exactly what they have.

Scope and licensing vary by environment. Product availability and support terms are confirmed during planning.
