

Aeris

Cellular IoT connectivity, SIM and device management, and IoT security.

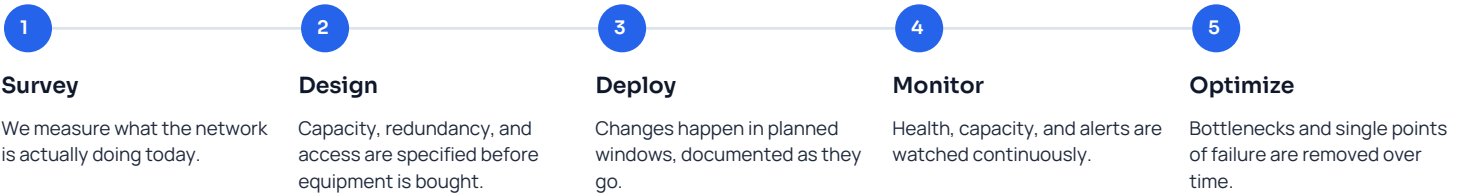

Service illustration • Networking Infrastructure

Aeris provides cellular IoT connectivity, SIM management, and IoT security. Massive IT helps customers connect devices and sites over cellular – for failover, remote locations, and IoT deployments.

A clear path to delivery

Product areas & practical applications

Product area	Practical application
Cellular IoT connectivity	multi-network connectivity for devices and remote sites
SIM and device management	provisioning, monitoring, and control of connected SIMs
IoT security	visibility and threat detection for connected devices
Cellular failover	backup connectivity when primary internet goes down

When to talk to us

- Sites that go offline whenever the primary internet circuit fails
- Remote or temporary locations without wired internet
- Fleets of connected devices that are hard to track and secure

Deployment & ongoing support

Massive IT designs cellular connectivity into network and IoT projects, provisions SIMs, integrates failover with firewalls and routers, and monitors usage.

Scope and licensing vary by environment. Product availability and support terms are confirmed during planning.
