

Palo Alto Networks

Next-generation firewalls, SASE, and security platforms

Overview

Palo Alto Networks is a leading cybersecurity vendor known for next-generation firewalls and secure access. Massive IT designs, deploys, and manages Palo Alto Networks security for customers that need enterprise-grade protection.

What we deploy and support

- Next-generation firewalls — hardware and virtual firewalls with application-aware policy
- Prisma Access / SASE — cloud-delivered secure access for remote users and branches
- Cortex XDR — endpoint and extended detection and response
- Cloud security — protection for workloads in public cloud

When customers call us

- Flat networks without segmentation or application control
- Remote users connecting through legacy VPNs
- Aging firewalls nearing end of support
- Security requirements that exceed what entry-level firewalls provide

How Massive IT works with Palo Alto Networks

Massive IT designs firewall and access architecture, migrates policies from legacy platforms, deploys and tunes Palo Alto Networks products, and provides ongoing management and monitoring.

Palo Alto Networks fits mid-market and enterprise organizations and regulated industries with demanding security requirements.
