

APC

UPS, power distribution, and rack infrastructure

Overview

APC by Schneider Electric makes uninterruptible power supplies, power distribution units, and racks. Massive IT sizes and deploys APC power infrastructure to protect servers and network equipment from outages and surges.

What we deploy and support

- Smart-UPS — line-interactive and online UPS systems for servers and network gear
- Rack PDUs — metered and switched power distribution
- NetBotz and monitoring — environmental and power monitoring
- Racks and enclosures — racks and cooling for network closets and server rooms

When customers call us

- Servers and switches that crash during brief power blips
- UPS batteries that are years past replacement
- No graceful shutdown during extended outages
- Messy, overheating network closets

How Massive IT works with APC

Massive IT sizes UPS runtime to the load, installs network management cards for monitoring and automated shutdown, and tracks battery replacement cycles.

APC fits any site with servers, network equipment, or phone systems that must stay up.
