

Juniper Networks

Routing, switching, wireless, and AI-driven network operations

Overview

Juniper Networks, now part of HPE, builds routing, switching, and wireless platforms, including the Mist AI-driven management platform. Massive IT designs, deploys, and supports Juniper networks for reliable, automated operations.

What we deploy and support

- Juniper Mist wireless — AI-driven Wi-Fi with cloud management
- EX and QFX switching — campus and data center switching
- MX and SRX — routing and security gateways
- Mist AI operations — proactive troubleshooting and network insights

When customers call us

- Network issues that take too long to troubleshoot
- Aging campus and data center switching
- Wi-Fi complaints without clear root causes
- Manual network changes that cause errors

How Massive IT works with Juniper Networks

Massive IT designs Juniper deployments, configures and migrates networks, and uses Mist AI insights to monitor and maintain them.

Juniper fits mid-market and enterprise campus, branch, and data center networks.
