

Cisco Meraki

Cloud-managed networking and security

Overview

Cisco Meraki delivers wireless, switching, security appliances, and cameras managed entirely from the cloud. Massive IT deploys and manages Meraki networks for customers that want simple, centralized management across sites.

What we deploy and support

- Meraki MR wireless — cloud-managed Wi-Fi access points
- Meraki MS switching — cloud-managed access and aggregation switches
- Meraki MX security appliances — SD-WAN, firewall, and VPN
- Meraki MV cameras — cloud-managed smart cameras

When customers call us

- Multiple sites managed separately with inconsistent settings
- No easy visibility into network health and clients
- Complex VPNs between offices
- Limited on-site IT staff at branch locations

How Massive IT works with Cisco Meraki

Massive IT designs Meraki deployments, configures templates for consistent multi-site setup, and monitors and manages the dashboard on the customer's behalf.

Meraki fits multi-site organizations, retail, healthcare, and education where centralized cloud management matters most.
