

Red Hat

Enterprise Linux, automation, and hybrid cloud

Overview

Red Hat provides enterprise Linux, automation, and hybrid cloud platforms backed by commercial support. Massive IT deploys and manages Red Hat Enterprise Linux and related platforms for customers running Linux workloads.

What we deploy and support

- Red Hat Enterprise Linux — supported Linux for servers on-premises and in the cloud
- Red Hat Ansible Automation Platform — automation for configuration and IT operations
- Red Hat OpenShift — container and application platform
- Lifecycle and patching — supported updates and long-term maintenance

When customers call us

- Unsupported or end-of-life Linux servers
- Manual, inconsistent server configuration
- Linux workloads moving to the cloud
- No in-house Linux administration expertise

How Massive IT works with Red Hat

Massive IT builds, patches, monitors, and maintains Red Hat systems, and uses automation to keep configurations consistent.

Red Hat fits organizations running business-critical Linux applications that need vendor support.
